## **INITIAL EACH LINE**

- The power port on the driver's seat base was confirmed working per instructions in video
- Harness was securely attached to amplifier bracket (per video in the instructions)**
- Door panels were trimmed, speakers were installed evenly without overtightening screws
- Tweeters were installed squarely into the pockets on the dash and connectors remained in the tweeter pocket
- Wires under the passenger seat were secured with zip ties and zip tie mounts**
- Subwoofer adjuster knob was installed under the cupholder
- Beatbox harnesses coming out of the seat were organized and secured with zip ties**
- Speaker/door harnesses were secured and organized neatly with zip ties that were cut flush
- Beatbox was tightly secured by the seat and seat base when the seat was reinstalled**
- Power wire was connected to a dedicated spot on OEM power distribution under driver's seat
- Ground wire was connected to a ground post under the driver's seat base
- The **MUSIC** channel of the center speaker was disconnected
- L/R balance works correctly and the subwoofer knob works correctly
- The Mercedes EQ was set to 0 for each setting
- Customer was given full orientation, including subwoofer knob
- Customer was informed that low quality audio sources (like satellite) may sound poor and that high quality lossless streaming apps should be used
- Any EQ in an app used or on their device should be turned off
- Customer was handed registration card with stickers/patch and was informed that this is so that RoamRig can help them with proactive product updates*

## **INCLUDE THESE PHOTOS**
